

Hello,

I hope that you are, or will soon be, enjoying your Global MX-5 race car. We have had a few questions about lap belt mounting for the passenger side, so I thought a short note may help answer any questions about your passenger safety belts.

1. The shoulder belts route through the seat and around the shoulder belt bar
2. The sub belt mounts to the seat plate
3. The passenger side left belt installs by drilling a hole in the transmission tunnel in the area shown in the picture below (please check that the underside is clear of lines, etc..) and putting the 3 X 3" backing plate on the transmission side, and the eyelet on the car interior side using Loctite during final assembly.

4. Install the passenger side right belt into the existing factory seat belt hole, with Loctite
